Spectre

RODENTS MONITORING AND CAPTURE SYSTEM

It's a remote network of high - tech sensors added to traps strategically placed around the monitored area.
Spectre ensures:

Reduction of intervention costs
Time saving in customer management
Increase of efficiency

EASY INSTALLATION BY QR CODE
on the top of each sensor. PCO can install unlimited number of sensors.

Each signal is transferred to the **monitoring unit and then to the server.**

SPECTRE SOFTWARE DISPLAYS
the network of sensors and the status of each individual monitor.

HIGH-TECH SENSORS monitor and broadcast their status through a long rage (LoRA) **radio transmission protocol.**

If rodents are detected or caught, the server sends real-time notifications to users (text message, email, app)

This enables the **operator to focus on the area of the infestation** and avoid to spend hours personally checking every trap.
